XGVela

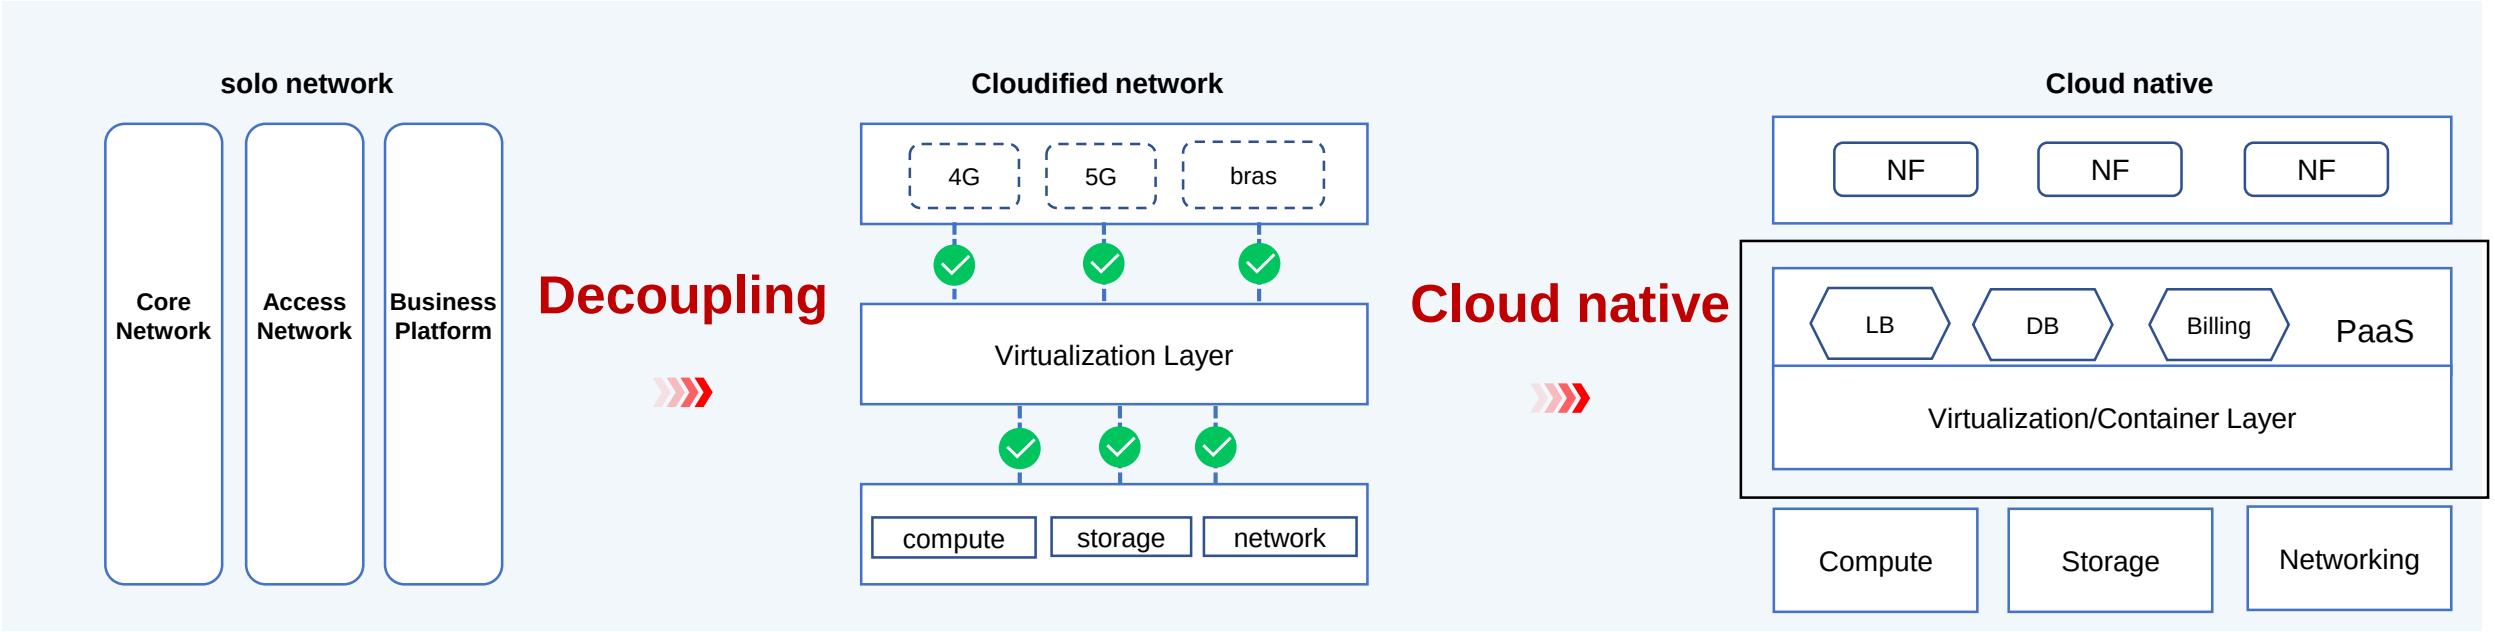
-- A 5G Cloud Native PaaS

Why XGVela?

XGVela | Why need cloud native telco PaaS (1/2)

- ✓ With the help of NFV, SDN and orchestration management technology, current operator network is transforming from the traditional hardware and software equipment to the layered and decoupled cloud network.
- ✓ In the future, thanks to the application of container, microservice and other technologies, it will eventually evolve into the cloud native network

Operators' Network Transformation



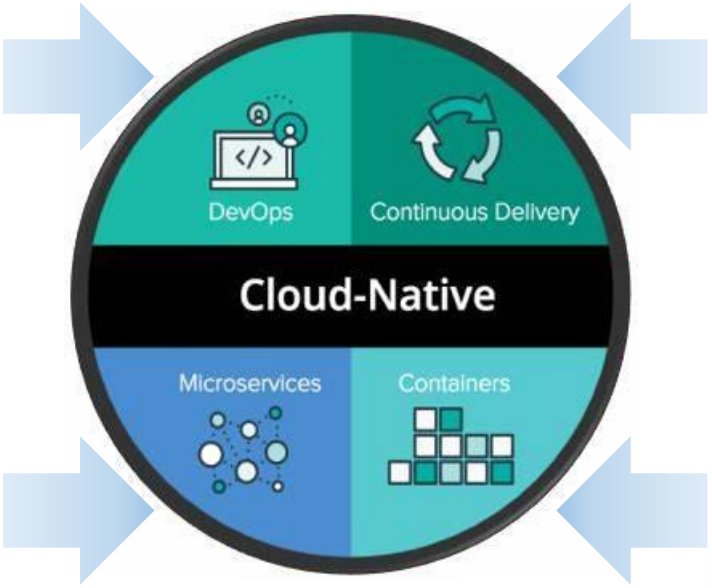
XGVela | Why need cloud native telco PaaS (2/2)

Fast-paced change in 5G requirements

- High flexibility in 2B scenarios
- Quick function upgrade
- Agile capabilities release

VM platform is inadequate

- Guest OS cumbersome
- Low deployment density
- Slow start and stop of virtual machine



Open & healthy eco-system

- Reduce barriers to enter the telco-industry
- Introduce healthy competition
- Expand and prosper the ecosystem
- Reduce the cost on network construction

Autonomous control of XGVela

- Carefully selected common services from NE to platform
- Standard APIs to provide capabilities
- Application development focus on service logic

XGVela Concept

XGVela | What is XGVela?

- **XGVela is an open source cloud native PaaS for applications and telco network functions, which is to enable new services and help mobile operators to seize the business opportunity from vertical industries in the 5G era.**
- **Vela stands for sail in Latin, and it is also the name of a constellation. With XGVela, a PaaS platform with telco features can be used to accelerate the design, development and innovation of telco related services.**

Core Idea

Cloud Native

Target object

Network Functions / Applications

Design Principle

Microservice

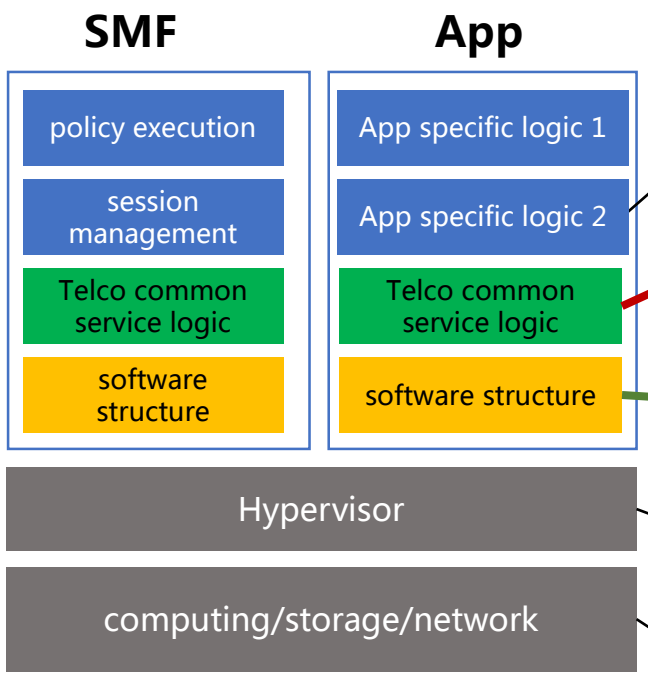
Technology Stack

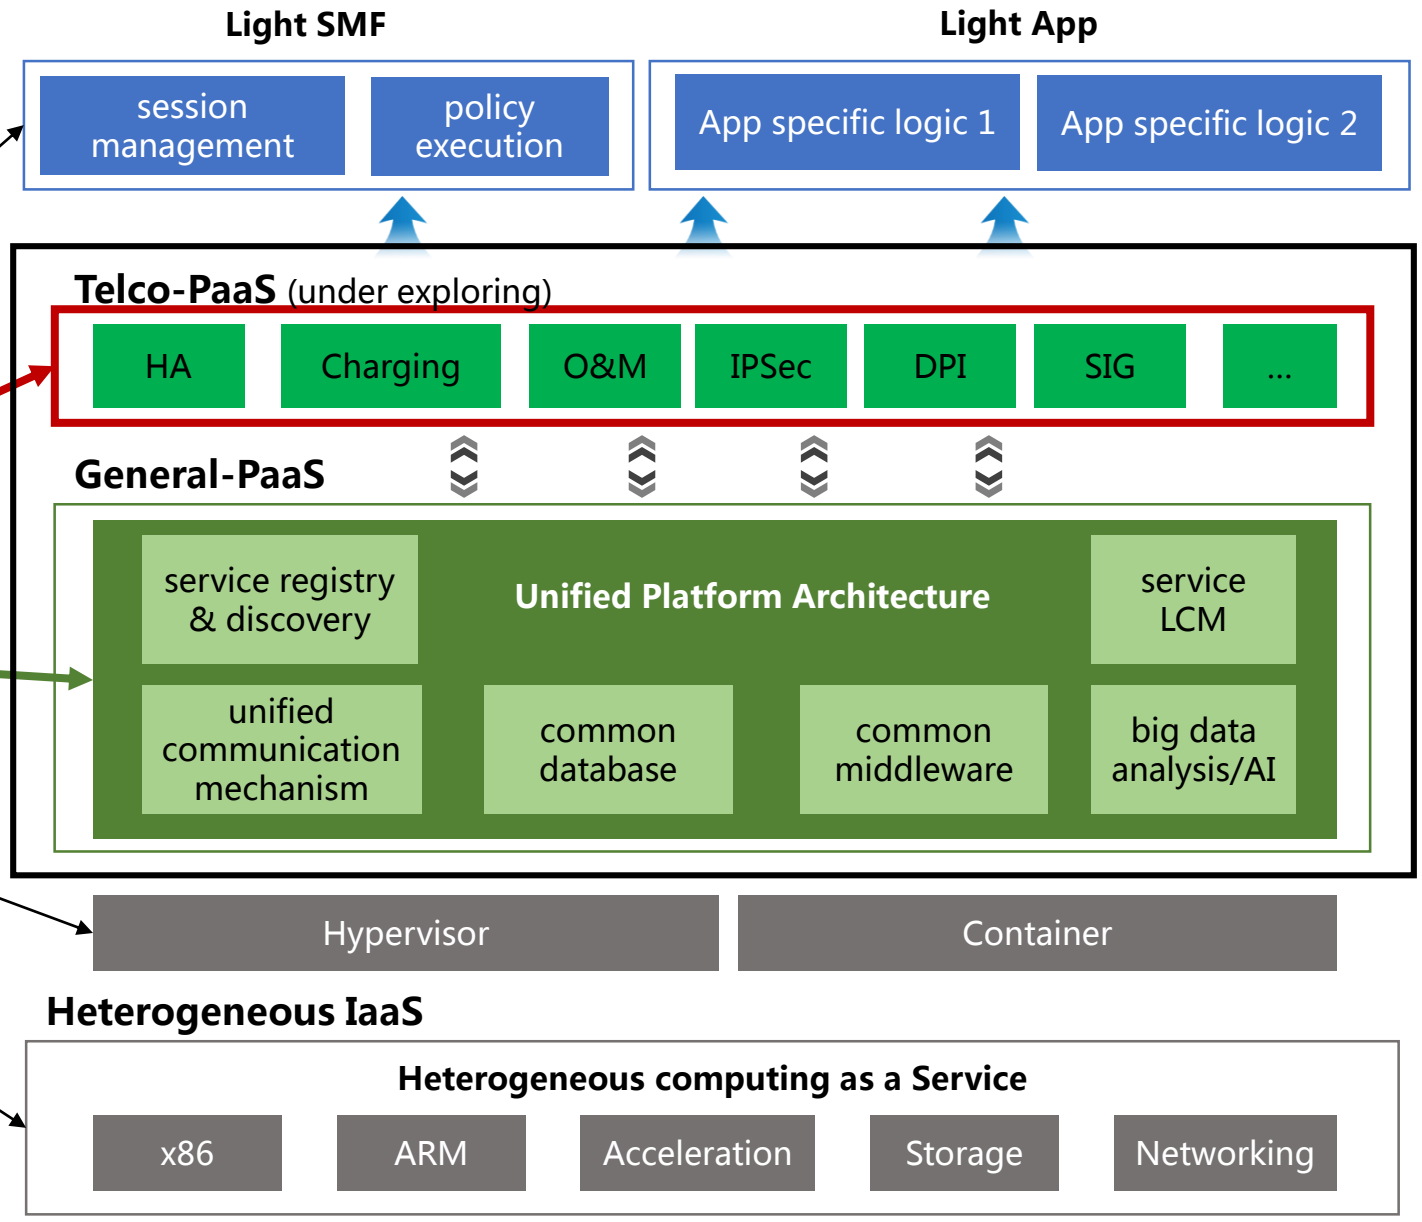
Container

XGVela | How to achieve XGVela?

1. Application tailoring:

- The NFs / applications are further decomposed according to the microservices architecture
- Strip away the parts that have nothing to do with the application itself



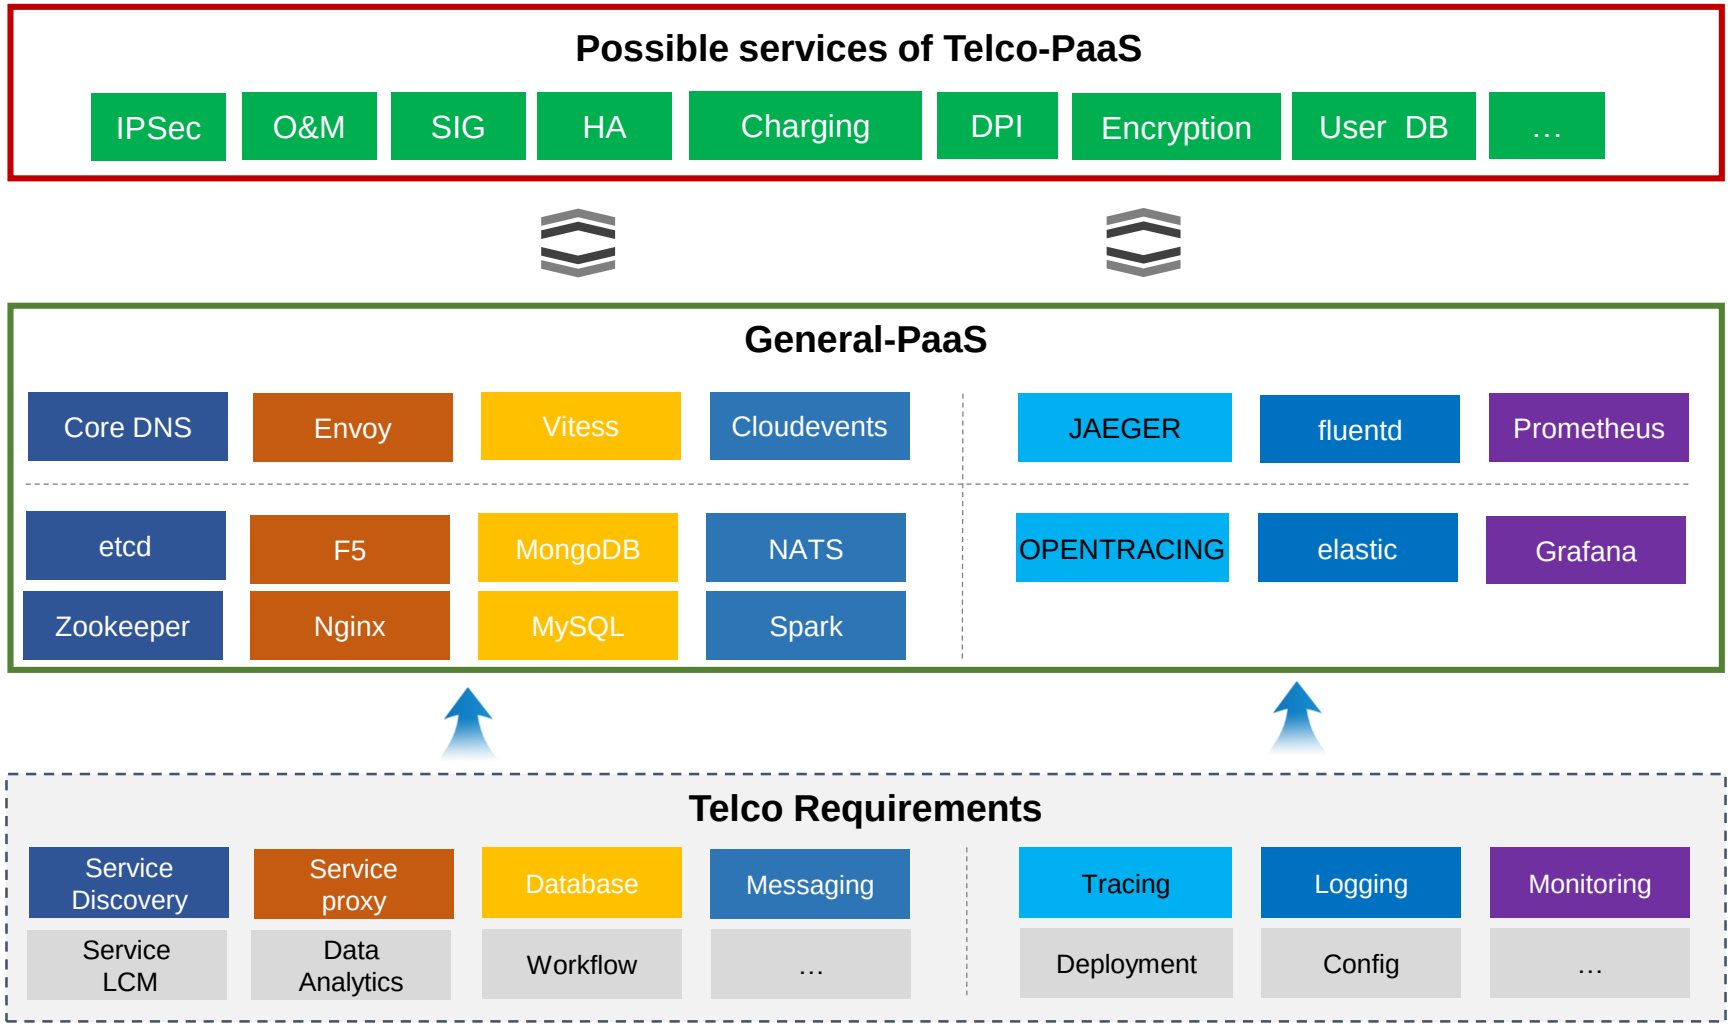


2. Platform addition:

- Support the coexistence of multiple resource forms
- Based on network element software architecture, the implementation of the general service rely on the platform
- Provides unified capabilities through API

XGVela | Details

- **XGVela integrates CNCF projects based on telco requirements to form General-PaaS. Telco enhancement requirements will be explored.**
- **XGVela studies 5G NF/application microservice design method, develop and integrate Telco-PaaS**



XGVela Overview

XGVela | Community Scope

Document

- Reference doc for cloud native network function and service design
- XGVela requirements doc, architecture doc, etc.
- XGVela platform User Guide

Development

- Telco PaaS (Functionalities, APIs, etc.)

Integration

- General-PaaS & Telco-PaaS

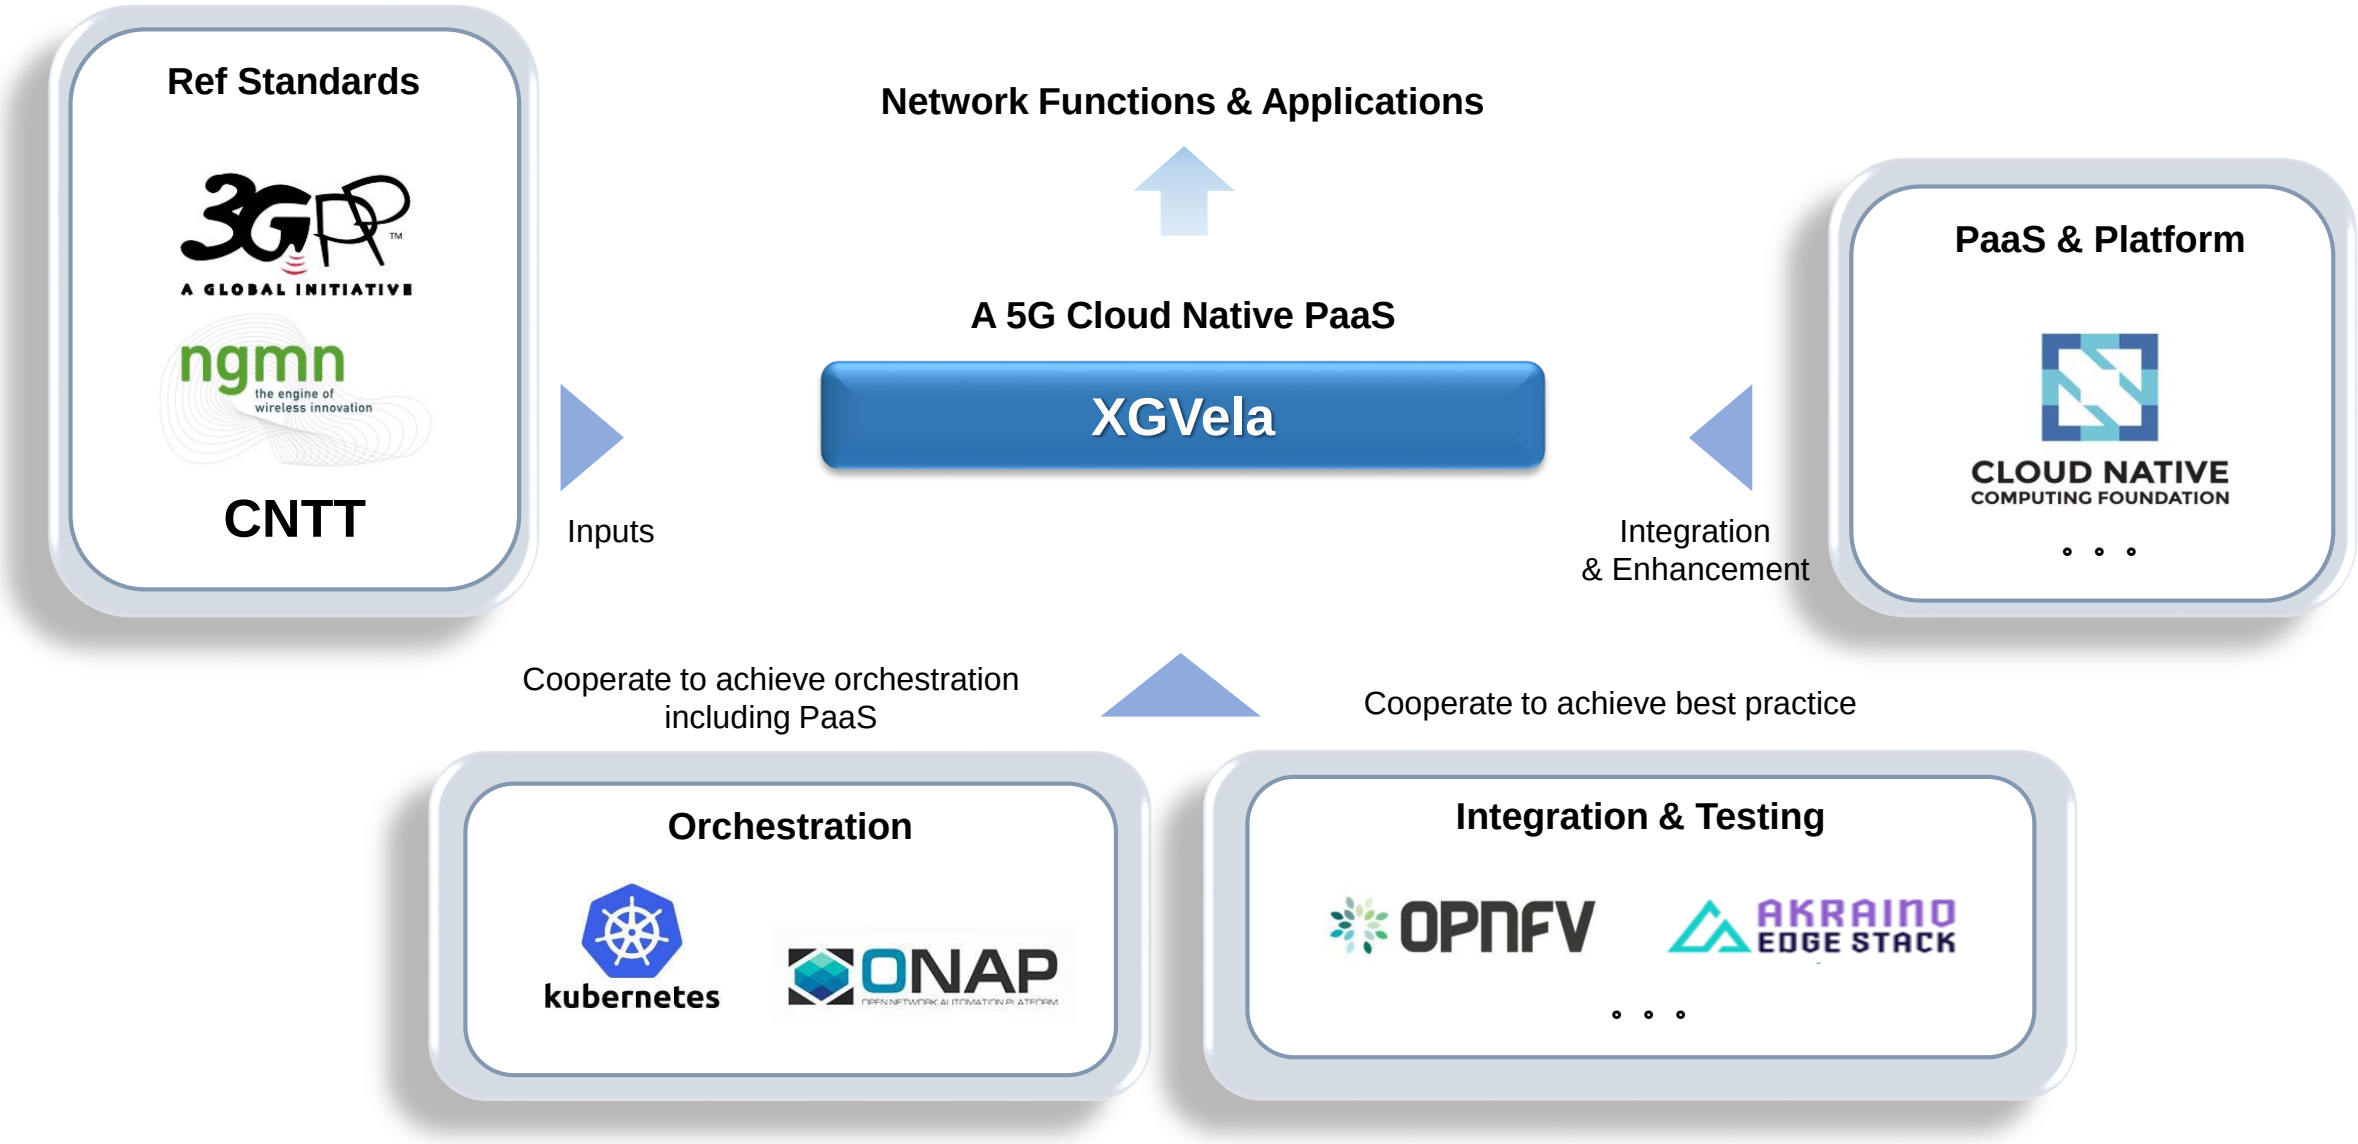
Testing

- XGVela with cloud native NF/applications
- XGVela with related orchestrators, etc.

Certification

- Commercial product certification

XGVela | Relationship with other Communities/Organizations



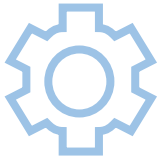
XGVela | Community Goals

Accelerate Cloud Native evolution

Gather efforts from all operators and vendors to promote cloud native evolution in telco industry

Instruct network element design

Form principles and guidance in network element design based on microservice architecture, for example: to separate business logic modular and protocol processing modular



Extract common telco features

Extract common telco features in network element design and implement them as reusable functions/services

Reduce development complexity

Existing tool set for network element design

XGVela production-level code

Implement XGVela as a deployable PaaS platform, support LCM and development of cloud native network element, act as reference platform

Unite standards and open source organizations

Expand cloud native vendor ecosystem in telecom industry

XGVela | Technical Scope

CNF Design

Container/ Microservice based NFs /applications

Telco cloud features

Specific telco feature requirements on cloud native compute, network, storage, security and etc. to support cloud native NFs/applications

Telco PaaS services

Common telco PaaS services extracted from cloud native VNF/application implementation, and other PaaS capabilities

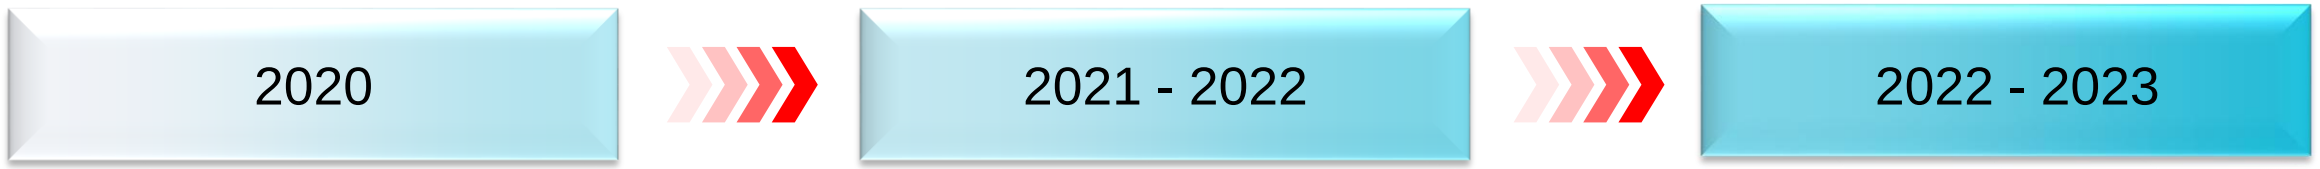
Orchestration, Network and etc.

Cooperation with other of open source projects such as Kubernetes, ONAP, ODL and etc.

APIs and procedures

Overall APIs and procedures of using XGVela, such as creating cloud native APIs, calling specific PaaS services

XGVela | Roadmap



Open source project: establish working group & clarify project goals

- *Apr 30*, launch as LF project
- *May~June*, get XGVela running
- Try to join LFN after project is stable
- Dec, Release 1

Testbed

- Build a prototype of cloud native telco-platform

Open source project

- Complete general PaaS definition
- Cooperate with vendors to complete prototype development

Testbed

- Introduce interworking of different vendors in the prototype

Open source

- Complete telco PaaS definition

Pilot test

- Build telco platform for operators

XGVela | Join XGVela

Question 1: Where can I find more info about XGVela?
Answer: Website & Github are under desgin.

Question 2: How do I join this community?
Answer: XGVela plans to be a unfunded project under LFN. Companies in LFN can join XGVela directly then. Individuals can join as long as you are interested in this project. You can subscribe to https://lists.xgvela.org/g/xgvela-tsc for project progress.

Question 3: Who can join this community?
Answer: Anyone interested in cloud native evolution in telco industry: operators, cloud providers, NF providers, suppliers, developers, etc.

Question 4: How can I contribute?
Answer: You can contribute to XGVela from now on, at the very beginning of this project. Contributions can be docs, codes, testbeds, etc. Contact us as long as you have ideas: zhaoqihui@chinamobile.com .

Thank you
